1 Introduction

This section includes an introduction to documents for this product and other document-related instructions.

1.1 About documentation

This document has instructions for a trained installer to install, configure, and operate this control panel, and optional peripheral devices. (Bosch Security Systems, Inc. recommends that installers follow good wiring practices such as those described in NFPA 731, Standard for the Installation of Electronics Premises Security Systems.) Throughout this document, the words “control panel” refer to all control panels covered by this document (B9512G/B8512G).

Notifications

This document uses Notices, Cautions, and Warnings to draw your attention to important information.

Notice!

These include important notes for successful operation and programming of equipment, or indicate a risk of damage to the equipment or environment.

Caution!

These indicate a hazardous situation which, if not avoided, could result in minor or moderate injury.

Warning!

These indicate a hazardous situation which, if not avoided, could result in death or serious injury.

Copyright

This document is the intellectual property of Bosch Security Systems B.V. and is protected by copyright. All rights reserved.

Trademarks

All hardware and software product names used in this document are likely to be registered trademarks and must be treated accordingly.

1.2 Bosch Security Systems, Inc. product manufacturing dates

Manufacturing dates
For product manufacturing dates, go to http://www.boschsecurity.com/datecodes/ and refer to the serial number located on the product label.
2 System overview

This section has the following information:
- Parts list, page 8
- Control panel capacities, page 8
- Accessories
- Features

2.1 Parts list

Control panels ship assembled from the factory with the following parts:

Literature
- Control Panels (B9512G/B8512G) UL Installation Manual
- Control Panels (B9512G/B8512G/B5512/B4512/B3512) Operation Manual
- Control Panels (B9512G/B8512G) SIA Quick Reference Guide
- Control Panels (B9512G/B8512G) Documentation CD
- Product Label in French
- 7000/9000 Series Point Chart Label

HW pack
- 1 kΩ EOL resistors
- Battery wires

Assembly
- PC board with protective cover
- Mounting skirt
- One #6 x 3/4-inch screw

2.2 Control panel capacities

The control panel supports 32 doors using the optional B901 Access Control Module. The control panel supports up to 8 doors using the optional D9210C Access Control Interface Module.

The control panel supports up to 16 of the keypads as SDI keypads.

Bosch IP cameras use is supplementary in UL Listed systems.
3 Control panel installation

Refer to Enclosures to determine if the application requires a specific enclosure.

Enclosure and control panel (back view) overview

<table>
<thead>
<tr>

</tbody>
</table>

3.1 Installing the enclosure

Notice!
Electromagnetic interference (EMI)
EMI can cause problems on long wire runs.

1. Remove the knockouts.
2. Mount the enclosure. Use all enclosure mounting holes. Refer to the mounting instructions supplied with the selected enclosure.
3. Pull the wires into the enclosure through the knockouts.
4. Position the supplied point label chart on the inside of the enclosure door (optional).

3.2 Installing the control panel

1. Position the control panel over the inside back of the enclosure.
2. Align the Holes to attach the mounting skirt to hooks with the hooks.
3. Slide the control panel down so that it hangs on the hooks.
4. Secure the mounting skirt screw.
3.2.1 Earth ground

To help prevent damage from electrostatic discharges or other transient electrical surges, connect the system to earth ground before making other connections. The earth ground icon identifies the earth ground terminal. Recommended earth ground references are a grounding rod or a cold water pipe. Make the connection using 14 AWG (1.8 mm) to 16 AWG (1.5 mm) wire.

To help prevent damage from electrostatic discharges or other transient electrical surges, connect the system to earth ground before making other connections. The icon shows the earth ground terminal. Use a recommended earth ground reference, such as a grounding rod or a cold water pipe. Make the connection using 14 AWG (1.8 mm) to 16 AWG (1.5 mm) wire.

Notice!
Do not use telephone or electrical ground

Do not use telephone or electrical ground for the earth ground connection. Do not connect other control panel terminals to earth ground.

Caution!
Avoid electrostatic discharge

Always touch the earth ground connection with the icon first, before beginning work on the control panel.

3.2.2 Ground Fault Detect enable

To meet UL 864 requirements, enable Ground Fault Detect.

A ground fault is a circuit impedance to ground sufficient to result in the annunciation of a trouble condition.

The control panel has a ground fault detection circuit that when enabled, detects ground faults on Terminals 1 to 9 and 11 to 30.

If a ground fault condition occurs, the keypads annunciate a ground fault and control panel transmits a trouble message.

When the control panel recognizes that the ground fault condition is corrected, and remains corrected for between 5 to 45 consecutive seconds, the control panel clears the fault from the keypad display and sends a restoral report.

The control panel detects ground fault at \( \leq 300 \, \Omega \).

Enabling Ground Fault Detect and reports

- In RPS or in the Installer Services Portal programming tool (available in Europe, Middle East, Africa, and China), set the following parameters:
  - PANEL WIDE PARAMETERS > Miscellaneous > Ground Fault Detection. Set to Enable.

3.2.3 Ground fault detection troubleshooting

The control panel requires \(-2.1\) V decay to 0.

Measuring and comparing voltage for ground fault detection

1. Set your digital voltmeter (DVM) to measure VDC.
2. Connect the red DVM lead to control panel Terminal 10, and the black DVM lead to Terminal 9.
3. Compare this voltage to the following table.
### Control panel voltage at Terminals 9 and 10

<table>
<thead>
<tr>
<th>Voltage range</th>

</tr>
</tbody>
</table>

### 3.3 Control panel to module wiring overview

You can use interconnect or terminal wiring to connect devices to the control panel. If SDIx is configured for SDI2, use either SDI2 bus.

**Using terminal wiring in parallel**

**Notice!**

**Wire size**

For terminal wiring, use 18 AWG to 22 AWG (1.0 mm to 0.6 mm) wire.
Using interconnect wiring

**Notice!**

**More information**
For more information on interconnect wiring, refer to SDI2 interconnect wiring.
SDI2 devices daisy chained with interconnect wiring
4 Power supply

This section provides information on installing and maintaining primary power, batteries, and auxiliary power.

4.1 Secondary (DC) power

A 12 V sealed lead-acid rechargeable battery (such as the D126/D1218) supplies secondary power to maintain system operation during interruptions of primary (AC) power.

**Notice!**
**Use sealed lead acid batteries only**
The charging circuit is calibrated for lead-acid batteries. Do not use gel-cell or NiCad batteries.

**Extra batteries**
To increase battery back-up time, connect a second 12 V battery in parallel to the first battery. Use a D122/D122L Dual Battery Harness to ensure proper and safe connection. Refer to Standby battery requirements and calculations.

**D1218 Battery**
The D1218 is a 12 V, 18 Ah battery for use in applications requiring extended battery standby time. The control panel does not support more than 38 Ah of battery.

4.1.1 Install the battery

1. Put the battery upright in the base of the enclosure.
2. Locate the red and black leads supplied in the hardware pack.
3. Connect the black battery lead to 4.
4. Connect the other end to the negative (−) side of the battery.
5. Connect the red battery lead to 5.
6. Connect the other end to the positive (+) side of the battery.

**Warning!**
**High current arcs are possible**
The positive (red) battery lead and the terminal labeled 5 can create high current arcs if shorted to other terminals or the enclosure. Use caution when you touch the positive lead and the terminal labeled 5. Always disconnect the positive (red) lead from the battery before you remove it from the terminal labeled 5.

**Caution!**
**Battery terminals and wire are not power limited**
Maintain a 0.250 in (6.4 mm) space between the battery terminals, battery wiring, and all other wiring. Battery wiring cannot share the same conduit, conduit fittings, or conduit knockouts with other wiring.
Non-power-limited wiring

Callout — Description

1 — Conduit required for use with external batteries
2 — Battery wires
3 — 0.25 in (6.4 mm) minimum. To ensure proper spacing, use tie-wraps or similar devices to secure wires.
4 — Output wires
5 — Sensor loop wires
6 — 12 V sealed lead-acid rechargeable battery (D126/D1218)

Charging the battery

1. Connect the battery
2. Connect the transformer.
3. Allow the control panel to charge the battery while you complete the installation.

4.1.2

BATTERY STATUS LED

The control panel includes one BATTERY STATUS LED with 4 LED patterns to indicate the battery status.
### LED pattern

<table>
<thead>
<tr>
<th>LED pattern</th>
<th>Function</th>
<th>Refer to</th>
</tr>
</thead>
<tbody>
<tr>
<td>Off</td>

</tr>
<tr>
<td>On Steady</td>
<td>Battery is missing, shorted, or reversed.</td>
<td><em>Missing battery</em>, page 17</td>
</tr>
</tbody>
</table>

#### 4.1.3 Battery maintenance

Use 12 VDC sealed lead-acid rechargeable battery (7 Ah, 18 Ah, or 38 Ah). The control panel supports up to 38 Ah of battery. If you use two batteries, they must have the same capacity, and you use a D22/D122L to connect them.

Replace the batteries every 3 to 5 years. If you install two batteries, replace them both at the same time.

Record the date of installation directly on the battery.

---

#### Caution!

Heavy discharges possible

The system can have heavy discharges if you exceed the maximum output ratings or install the transformer in an outlet that is routinely switched off. Routine heavy discharges can lead to premature battery failure.

#### 4.1.4 Battery supervision

**Low battery**

If the control panel is programmed for power supervision, it sends a Battery Low report in the Conettix Modem4 format or a Low System Battery (302) report in the Conettix ANSI-SIA Contact ID format.

**Missing battery**

If the control panel is programmed for power supervision, it sends a Battery Missing/Dead report in the Conettix Modem4 format, or a Control Panel Battery Missing (311) report in the Conettix ANSI-SIA Contact ID format.

**Battery restoral**

When AC returns and the battery is charged, if the control panel is programmed for power supervision, it sends a Low System Battery Restore report in the Conettix Modem4 format or a Control Panel Battery Restored to Normal (302) report in the Conettix ANSI-SIA Contact ID format.
4.1.5 Battery charging circuit float charge
The float voltage for the battery charging circuit is 13.65 VDC when operating within load range.

**Load shed**
Load shed relay protects battery: During an AC power loss, the battery supplies all power to the security system. If the battery voltage falls below 10.0 V during an AC power loss, a load shed relay disconnects the battery from the control panel and disables control panel. Load shed protects the battery from being damaged by deep discharge.

When AC power restores, the load shed relay reconnects the charging circuit on control panel to the battery and the battery begins to recharge.

**Over load with AC present**
If devices draw more than 1.6 A of auxiliary current from the control panel with AC applied, the control panel indicates a Panel Over-current system trouble. Unless corrected, this condition prevents the control panel from properly maintaining the battery charge level, and leaves the system vulnerable to failing during power outages.

To correct the issue, remove all loads to the control panel and disconnect the battery and AC power. Fix the condition creating the over current and reconnect AC power.

A shorted battery condition (created either by a shorted cell inside the battery or by a short on Terminals 4 and 5), might prevent the control panel from operating, or might cause the control panel to detect a missing battery condition.

---

**Caution!**
Shorting the battery terminals is dangerous.

4.1.6 Battery discharge and recharge schedule

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

4.2 B520 aux power supply
The optional B520 provides up to 2 A of 12 VDC standby power for Fire and Burglar applications. For Burglar applications, an additional 2 A of alarm power is available, allowing 2 A of standby current and up to 4 A of alarm current.

The control panels support the following number of B520 modules:
- B9512G. 8
- B8512G. 4

The power supply draws approximately 15 mA (+/- 1 mA) from the control panel.

For additional information on supported peripherals, refer to the technical documentation of these peripherals.
When using multiple NACs, the power for each D192G to support notification appliances must have its own power limited and isolated power from a UL864 listed supply, such that one NAC does not prevent another NAC from providing its alarm notification operation.

4.2.1 SDI2 address settings

 Notice!
The module reads the address switch setting only during module power up. If you change the setting after you apply power to the module, you must cycle the power to the module in order for the new setting to take effect.

If multiple B520 modules reside on the same system, each B520 module must have a unique address.

4.2.2 Supervision

The control panel supervises any B520 on the SDI2 bus. With any failure to receive an expected response from a B520, all keypads show a system fault. The control panel sends a module trouble report to the central station (if configured for module trouble reports).

4.2.3 Auxiliary power supply trouble conditions

Each auxiliary power supply module on the SDI2 bus monitors several conditions including AC status, battery status, over current status, and a tamper input. Each of these conditions produces a unique system trouble condition at all keypads. The control panel sends a module trouble report to the central station (if configured for module trouble reports).

4.2.4 Installation and control panel wiring (B520)

 Calculate power consumption
Make sure that there is enough power for the module and the other powered devices that you want to connect to the system.
Refer to On-board outputs, page 23.

 Caution!
Remove all power (AC and battery) before making any connections. Failure to do so might result in personal injury and/or equipment damage.

Installing the module
1. Set the module address.
2. Insert the plastic mounting clips onto the standoff locations inside the enclosure or on a mounting skirt, when required.
3. Mount the module onto the plastic mounting clips.
4. Tighten the supplied mounting screws.

Wiring to earth ground
- To help prevent damage from electrostatic charges or other transient electrical surges, connect the system to earth ground before making other connections.
Notice!
Earth ground reference
Do not use telephone or electrical ground for the earth ground connection. Use 14 AWG (1.8 mm) to 16 AWG (1.5 mm) wire when making the connection.
Use a grounding rod or a cold water pipe.
Run wire as close as possible to grounding device.

**Callout — Description**
1 — B520 Auxiliary Power Supply Module
2 — 14 AWG - 16 AWG (1.8 mm - 1.5 mm) wire
3 — Ground device (grounding rod or cold water pipe)

Wiring to the control panel

Notice!
Terminal wiring
Use the terminal strip labeled with PWR, A, B, and COM for SDI2 IN to wire to corresponding control panel SDI2 terminals. Do not use interconnect wiring.
Use 12 AWG to 22 AWG (2.0 mm to 0.6 mm) wire.

**Callout — Description**
1 — Control panel
2 — B520 Auxiliary Power Supply Module
3 — Terminal strip wiring

**4.2.5 Powered device and battery wiring**
When you wire the output of a B520 to a SDI2 module, the B520 provides power to the module while passing through data between the control panel and the module.
Wiring SDI2 modules

1. Do one of the following:
   Use terminal wiring to connect the SDI2 OUT terminal strip labeled with PWR, A, B, and COM on the B520 to the terminals labeled PWR, A, B, and COM on the first module.
   Connect an interconnect wiring cable (included) to the SDI2 OUT interconnect connector on the B520 to the interconnect connector on the first module.

2. Connect additional modules in series with the first module.

Wiring to batteries

Notice!

Battery wiring requirements
You must wire BATT 1. You must wire BATT 2 if you configure the B520 for two batteries.
When you use BATT 2, both batteries must have the same rating.
Maximum standby power cannot exceed 36 Ah.
1 — B520 Auxiliary Power Supply Module
2 — Battery 2 (BATT 2) · (12 V nominal lead acid)
3 — Battery 1 (BATT 1) · (12 V nominal lead acid)
5  On-board outputs

The control panel provides three powered relay outputs.

5.1  Circuit protection

The powered outputs come with circuit protection.

Four self-resetting circuit breakers protect the control panel from short circuits on the continuous and programmable power outputs. Each breaker protects a separate terminal or group of terminals:

- Terminal 3, auxiliary power
- Power terminals
  - Terminal 6, Alarm power output
  - Terminal 7, Alternate alarm power output
  - Terminal 8, Switched auxiliary power
  - Terminals 26 and 30, power +
  - ZONEX connection

Notice!
A short circuit on one terminal disrupts power to the other two terminals.

Notice!
UL requirement
Supervise devices powered from a power output.

5.2  Total available power

The system produces up to 1.4 A of combined power at 12.0 VDC nominal. The outputs in this section share the available power. These outputs appear as shown on the faceplate.

3  Auxiliary power
Power devices requiring continuous power.

6  Output A (1), Alarm power output
Programmable output normally open, power on alarm.

7  Output B (2), Alternate alarm power output
Programmable output normally open, power on alarm.

8  Output C (3), Switched auxiliary power
Programmable output normally closed, switches power off when the Sensor Reset command is executed.

26  SDIx Power+ / R
Powers serial device interface (SDI) keypads, or use to power serial device interface 2 (SDI2) devices, such as keypads and expansion modules.
30 **SDI2 Power+ / R**

Powers serial device interface 2 (SDI2) devices, such as keypads and expansion modules.

**ZONEX**

**ZONEX Power**

Powers ZONEX modules such as the D8125, D8128D, and D8129 connected through the B600.

### 5.3 Continuous power outputs

3 26 30 **ZONEX**

The continuous current draw for powered devices connected to Terminals 3, 26, and 30, and the ZONEX connector must not exceed 1.4 A. Devices powered from these outputs operate at 12.0 VDC Nominal.

**Notice!**

**Power Restricted for Fire and Combined Fire and Burglary Systems**

Use the *Fire system power formula, page 25* to calculate the current available for fire and combined fire and burglary systems.

### 5.4 Programmable power outputs

6 7 8

The power outputs at Terminals 6, 7, and 8 are programmed as Outputs A (1), B (2), and C (3).

Assign each output an output type (Steady Alarm Bell, for example), when assigning it to an area. You can assign an output to one or more areas.

The defaults are:

- Output A (1) - Terminal 6 - as a Steady Alarm Bell output
- Output B (2) - Terminal 7 - as a Pulsed Fire Bell output
- Output C (3) - Terminal 8 - as a Verification or Reset output for smoke detectors

The Program Entry Guide contains complete instructions for programming outputs. Refer to the Bell Parameters section of the program to set the Fire Bell, Alarm Bell output responses for outputs. Four annunciation patterns are available: Steady, Pulsed, California Standard, and Temporal Code 3.

If Terminals 6, 7, and 8 do not provide the expected output, check:

- The Outputs section of the program for Outputs A (1), B (2), and C (3).
- The Bell Parameters section of the program to confirm that the Alarm and Fire Bell responses are programmed for the expected duration and pattern.
- The Point Assignments section to confirm that each point is programmed for the expected local response.

### 5.4.1 Terminals 6 and 7

6 7

When activated, Terminals 6 (Output A) and 7 (Output B), provide a positive (+) 12.0 VDC Nominal power output. Use the power at Terminals 6 and 7 to power bells, siren drivers, piezoelectric sounders, electronic horns, or other devices.

Programming determines the format of the output and the conditions that activate it.
When using Output A or Output B to activate notification appliance circuits in UL Listed fire alarm applications, install a D192G.

**Power restricted for Fire and Combined Fire and Burglary Systems**

Fire systems are prohibited from using the battery for supplying alarm power. Use the fire system power formula that follows to calculate the current available for fire and combined fire and burglary systems.

**Fire system power formula**

Calculating the current available at Terminals 6 and 7 for fire and combined fire and burglary systems:

1. Add together the current draws for all devices connected to Terminals 3, 26, and 30, and the ZONEX connector. This is the total current required for the normal standby condition (NSC).
2. The current available for NSC is 1.4 A. Subtract the NSC current required calculated in Step 1 from the NSC current available, 1.4 A. The difference is the alarm current available for Terminals 6 and 7.

In formula format: \[1.4 \text{ A} - \text{NSC current required (Step 1)} = \text{Alarm current available}\]

Refer to Approved applications for module or accessory current requirements

5.4.2 **Terminal 8**

Terminal 8 provides continuous positive (+) 12.0 VDC Nominal power. Output C interrupts the power at Terminal 8 when activated. Use Terminal 8 to power smoke detectors or other devices that reset by interrupting power.

**Verify and reset Output C**

The default program sets Output C (Terminal 8) as a verification and reset output. Refer to Output Parameters and Point Assignments in the control panel Program Entry Guide for instructions on programming verification and resetting outputs and points.

Performing a sensor reset at a keypad produces a five-second activation of verification and resettable outputs. The control panel ignores verification and resettable points during the five seconds.

5.5 **USB power**

In addition to connecting RPS or the Installer Services Portal programming tool (available in Europe, Middle East, Africa, and China) to the control panel for programming, you can use the USB port on the control panel to power USB-powered devices.

When enabled, the USB port provides 500 mA of 5 V power. The port draws the power from the control panel. Make sure that there is enough power for all the powered devices you want to connect to the system.

Enabling USB power:

- Do one of the following:
  - Press the control panel RESET button 3 times.
  - Use the keypad Installer menu (refer to [7] USB Power).

The USB POWER STATUS LED lights when power to the USB is turned on.

You can disable USB at any time. Use the Installer menu or press the control panel RESET button 3 times.
6 Control panel board overview

Callout — Description

1 — BATTERY STATUS LED
2 — Holes to stabilize plug-in modules
3 — Plug-in module connectors
4 — Plug-in module connector
5 — SDI2 wiring
6 — SDIx wiring (use as SDI or SDI2)
7 — Heartbeat LED (blue)
8 — RESET button
9 — Tamper switch connector location
10 — Zonex module connector location
11 — Sensor loop terminals for points 1 to 8
12 — BASE-T LED (green)
13 — On-board Ethernet connector
14 — LINK LED (yellow)
15 — USB connector
16 — USB POWER STATUS LED

The equipment should be installed in accordance with the UL60899 and/or UL1641 standards. To be in accordance with one or more of the following standards: UL1641, UL1077, UL494 and C22.1, CEC, Part 1.

Voltage Ranges: Open 3.7 - 5.0 VDC, Short 0.0 - 3.5 VDC, Normal 1.0 - 3.0 VDC
1 x 10 kΩ±5% ±100 mA, Pull up and down resistors required (P/N 1600310-004), Max Loop Current: 5 mA
7 System wiring diagrams

Notice!
UL notifications
Add additional power using only a UL Listed 12.0 VDC regulated, power-limited power supply such as the B520.
All terminals except Outputs A (1), B (2), and C (3) (Terminals 6, 7, and 8) are supervised.
For proper supervision, do not loop wire under terminals. Break the wire run to provide supervision of connections.

Notice!
The installation document of the fire product shall specify that all wiring, including that to the non-fire alarm equipment, shall be installed in accordance with the requirements of the National Fire Alarm and Signaling Code, NFPA 72.

7.1 Power supply side wiring

Callout — Description
1 — D113 Supervision module, battery lead (if required by local AHJ)
2 — Batteries
3 — D122/D122L Dual Battery Harness, as required
4 — To supervision point
5 — End-of-line-Resistor Required (P/N 15093130-004), WARN! Multi-Battery in addition required Model D122 or D122L Dual Battery Harnesses. Important: only for fire hazard.
6 — 560 Ω, 2 W EOL resistor (P/N: 15-03130-005)
7 — To control panel SD12 wiring
8 — D192G Notification appliance module
9 — To OUTPUT A (1) or OUTPUT B (2)
10 — To OUTPUT A (1) or OUTPUT B (2)
11 — To OUTPUT A (1) or OUTPUT B (2)
12 — To OUTPUT A (1) or OUTPUT B (2)
13 — To OUTPUT A (1) or OUTPUT B (2)
5 — Transformer
6 — B520 Auxiliary Power Supply Module
7 — To powered devices
12 — Listed audible signaling devices rated at 12.0 VDC nominal (do not use vibrating type horns)
13 — To earth ground

### 7.2 Input points wiring with D125B, D130, or D129

![Diagram of input points wiring with D125B and a D129](image)

**Figure 7.1:** Input wiring with a D125B and a D129

#### Callout — Description

<table>
<thead>
<tr>
<th>Callout</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>D125B Dual Class B Initiating Module</td>
</tr>
<tr>
<td>2</td>
<td>To compatible UL listed two-wire smoke detectors. Refer to the D125B Installation Instructions for a listing of compatible two-wire smoke detectors.</td>
</tr>
<tr>
<td>3</td>
<td>D129 Dual Class A Initiation Circuit Module</td>
</tr>
<tr>
<td>4</td>
<td>For wiring instructions, refer to the D129 Dual Class A Initiation Circuit Module Installation Instructions.</td>
</tr>
</tbody>
</table>

### Notice!

The D129 must be mounted inside the enclosure with the control panel. The power for the D129 module must be mounted within the same room no more than 20 ft (6 m) apart. The interconnecting wires between the control panel and external power supply must be in conduit.
Notice!
Use zero retard except for workflow devices.
All external connections except Terminal 5 (battery positive) are power limited.
Optionally, for 24 V applications, use a UL 864 listed, regulated, power-limited 24 VDC power supply with a D130 Relay Module. Refer to the D130 Installation Instructions for correct wiring requirements.

7.3 Input points wiring with or without EOL resistors

Notice!
**EOL resistors**
For the dual EOL resistor circuit style order ICP-1K22AWG-10, package of 10 1.0 kΩ EOL resistors.

---

**Figure 7.2:** Single EOL (NC or NO)

<table>
<thead>

</tr>
<tr>
<td>4 - 1.0 kΩ resistor at EOL (end-of-line)</td>
</tr>
</tbody>
</table>

Notice!
The No EOL option does not support the use of NO and NC contacts simultaneously.
7.4 SDI and ZONEX wiring

**Notice!**
Install Fire and Intrusion devices only on separate circuits. Refer to the ICP-SDI-9114 Installation Instructions.
All external connections except Terminal 5 (battery positive) are power limited.

---

<table>
<thead>
<tr>
<th>Callout — Description</th>
<th>Callout — Description</th>
</tr>

<tbody>
<tr>
<td>1 — B600</td>
<td>5 — Up to 119 D9127U/T POPITs</td>
</tr>
<tr>
<td>2 — SDI keypads when configuring SDIx for SDI (refer to System power/size)</td>
<td>6 — ZONEX connection cable (P/N: F01U295103) (included)</td>
</tr>
<tr>
<td>3 — Up to 8 D9210C Access Control Interface Modules</td>
<td>7 — Interconnect cable (P/N: F01U079745) (included)</td>
</tr>
<tr>
<td>4 — D8125 POPEX Modules</td>
<td></td>
</tr>
</tbody>
</table>

*The number of D8129 Octo-relay modules allowed for each ZONEX terminal on the B600 is limited by the number of D8128D OctoPOPITs connected to the same terminal. Refer to the D8128D Installation Guide or the D8129 Operation and Installation Guide for detailed instructions.*
7.5 SDI2 devices general system wiring

Callout — Description | B9512G Capacity | B8512G Capacity
--- | --- | ---
1 — B208 | 59 | 9
2 — B299 | 6 | 1
3 — B308 | 59 | 9
4 — B426 or B450 | 2 | 2
5 — B520 | 8 | 4
6 — B810 or B820 | 1 | 1
7 — B901 | 32 | 8
8 — SDI2 keypads | 32 | 16
9 — Configurable for SDI keypads and access control interface modules, or SDI2 devices

Notice!
Each SDI2 bus supports up to 99 devices.
The SDI2 power terminal (PWR+/R) is power limited. The SDI2 terminals are supervised.

7.5.1 SDI2 bus wiring recommendations
Use the following SDI2 bus wiring recommendations for SDI2 installation. The control panel and SDI2 modules use the SDI2 bus to communicate with one another.
You can wire modules via home run, daisy chain, or single level T-tap anywhere on the SDI2 bus.
Notice!

There can only be a difference of 2 volts (maximum) between the AUX power terminals of the control panel or power supply and the device for the modules and keypads to work properly under all conditions.

Maximum cable lengths

Follow these rules when wiring the SDI2 bus:
- The SDI2 bus requires the use of unshielded cable from 12 AWG to 22 AWG (0.65 mm to 2 mm).
- Refer to the SDI2 device or keypad documentation for the allowable maximum distance from the control panel.
- Maximum overall cable lengths are listed in the following table:

7.7 Earth ground wiring

To help prevent damage from electrostatic discharges or other transient electrical surges, connect the system to earth ground before making other connections. The icon shows the earth ground terminal. Use a recommended earth ground reference, such as a grounding rod or a cold water pipe. Make the connection using 14 AWG (1.8 mm) to 16 AWG (1.5 mm) wire.

Notice!
Do not use telephone or electrical ground
Do not use telephone or electrical ground for the earth ground connection. Do not connect other control panel terminals to earth ground.

Caution!
Avoid electrostatic discharge
Always touch the earth ground connection with the icon first, before beginning work on the control panel.

7.7.1 Ground Fault Detect enable

To meet UL 864 requirements, enable Ground Fault Detect.

A ground fault is a circuit impedance to ground sufficient to result in the annunciation of a trouble condition.

The control panel has a ground fault detection circuit that when enabled, detects ground faults on Terminals 1 to 9 and 11 to 30.

If a ground fault condition occurs, the keypads annunciate a ground fault and control panel transmits a trouble message.

When the control panel recognizes that the ground fault condition is corrected, and remains corrected for between 5 to 45 consecutive seconds, the control panel clears the fault from the keypad display and sends a restoral report.

The control panel detects ground fault at ≤ 300 Ω.

Enabling Ground Fault Detect and reports

- In RPS or in the Installer Services Portal programming tool (available in Europe, Middle East, Africa, and China), set the following parameters:
  - PANEL WIDE PARAMETERS > Miscellaneous > Ground Fault Detection. Set to Enable.

7.7.2 Ground fault detection troubleshooting

The control panel requires -2.1 V decay to 0.

Measuring and comparing voltage for ground fault detection

1. Set your digital voltmeter (DVM) to measure VDC.
2. Connect the red DVM lead to control panel Terminal 10, and the black DVM lead to Terminal 9.
3. Compare this voltage to the following table.

<table>
<thead>
<tr>
<th>Control panel voltage at Terminals 9 and 10</th>

B925F Fire Keypad operating instructions

This keypad is a full-function system controller and annunciator. The illuminated keypad has a display and a sounder that emits distinct condition tones to alert you to fire alarm, fire trouble, or fire supervisory events as they occur. In conjunction with the display and sounder, seven status indicators provide the following system status information as described below.

Required: Mount this document in view of the fire keypad.

Overview

Status indicators
The Status indicators provide a quick visual reference of the system status.

- **Fire**: Lights when a fire alarm condition exists; turns off when all fire alarm points return to normal.
- **Silenced**: Lights when a fire alarm condition is silenced; turns off when a user presses the RESET button or if another fire alarm condition appears.
- **Supervisory**: Lights when any point programmed as supervisory is not normal; turns off when all supervisory points return to normal.
- **Trouble**: Lights when a trouble condition exists.
- **Ready to arm**: Lights when the system is ready to turn on (armed).
- **On (armed)**: Lights when the system is on (armed).
- **Gas**: Lights when a gas alarm exists.
- **Power**: Lights to indicate the control panel has AC power.

Fire function keys
- **ACK**: Press to acknowledge the system alarm or trouble condition.
- **SILENCE**: Press to silence fire alarm or trouble.
- **RESET**: Press to reset devices such as smoke detectors.
- **DRILL**: Press and hold to initiate fire drill.

Navigation and number keys
The keypad includes keys for navigating and entering passcodes:
- **PREV** and **NEXT**: Use to scroll through menus or menu selections.
- **ENTER**: Use to complete the entry of your passcode or other numbers, or to answer Yes to a keypad request.
- **ESCAPE (ESC)**: Use to exit from menus and functions, or use as a backspace when you enter names and numbers.
- **Number keys**: Use to enter passcodes or other numbers and letters.

Alphanumeric display

Fire Status indicators
The Fire Status indicators provide a quick visual reference of the fire system status.

- **Fire**: Lights when a fire alarm condition exists; turns off when all fire alarm points return to normal.
- **Silenced**: Lights when a fire alarm condition is silenced; turns off when a user presses the RESET button or if another fire alarm condition appears.
- **Supervisory**: Lights when any point programmed as supervisory is not normal; turns off when all supervisory points return to normal.
- **Trouble**: Lights when a trouble condition exists.

Intrusion function keys
- **ALL**: Press to turn the system All On.
- **PART**: Press to turn the system Part On.
- **BYPASS**: Press to open the menu to bypass points.
- **MENU**: Press to open the keypad’s Main menu.

Operation

Normal operation
When in normal operation and off (disarmed), the keypad shows programmed idle text, such as “Fire System”, or System Ready.

Fire Alarm operation
When a fire alarm occurs, the Fire indicator lights, and the keypad emits a pulsing high-pitched fire tone (____ ____ ____). The tone sounds for the duration set by your security company. The keypad shows the first point that entered alarm and its area. Press ACK to acknowledge the alarm. The keypad shows the next point in alarm, if applicable. Press SILENCE to silence the alarm.

Fire Trouble operation
When a trouble condition occurs (such as wiring for a point is cut or AC power fails), the keypad sounder activates briefly approximately every six seconds. The Trouble indicator lights and the keypad shows the highest priority trouble. Press ACK to acknowledge the trouble. To view and acknowledge additional system or point troubles, press NEXT repeatedly.

Fire Supervisory operation
When a supervisory condition occurs, the sounder activates briefly approximately every six seconds. The Supervisory indicator lights and the keypad shows a fire supervisory message. Press ACK to acknowledge the supervisory condition. To view and acknowledge point supervisory conditions, press NEXT repeatedly.

Silence and reset
Alarm or Trouble silence. Press SILENCE and enter your passcode.
Detector reset. Press RESET and enter your passcode (if required). You can also use [CMD][4][7], or the Menu to reset detectors.

9 B926F Fire Keypad operating instructions

This keypad is a full-function system controller and annunciator. The illuminated keypad has a display and a sounder that emits distinct condition tones to alert you to fire alarm, fire trouble, or fire supervisory events as they occur. In conjunction with the display and sounder, seven status indicators provide the following system status information as described below.

Required: Mount this document in view of the fire keypad.

### Overview

**Status indicators**

- The Status indicators provide a quick visual reference of the system status.
  - Ready to arm (on (armed))
  - On (armed)
  - Silenced
  - Gas
  - Power
  - Supervisory
  - Trouble

**Fire Status indicators**

- The Fire Status indicators provide a quick visual reference of the fire system status.
  - Fire
  - Silenced
  - Supervisory
  - Trouble

**Navigation and number keys**

The keypad includes keys for navigating and entering passcodes:
- PREV and NEXT. Use to scroll through menus or menu selections.
- ENTER. Use to complete the entry of your passcode or other numbers, or to answer Yes to a keypad request.
- Backspace when you enter names and numbers.
- ESC. Use to exit from menus and functions, or use as a backspace when you enter names and numbers.
- Number keys. Use to enter passcodes or other numbers and letters.

**Fire function keys**

- ACK. Press to acknowledge the system alarm or trouble condition.
- SILENCE. Press to silence fire alarm or trouble.
- RESET. Press to reset devices such as smoke detectors.
- DRILL. Press and hold to initiate fire drill.

**Operation**

**Normal operation**

When in normal operation and off (disarmed), the keypad shows programmed idle text, such as "*Fire System*, or System Ready.

**Fire Alarm operation**

When a fire alarm occurs, the Fire indicator lights, and the keypad emits a pulsing high-pitched fire tone (____ ____)_. The tone sounds for the duration set by your security company. The keypad shows the first point that entered alarm and its area. Press ACK to acknowledge the alarm. The keypad shows the next point in alarm, if applicable. Press SILENCE to silence the alarm.

**Fire Trouble operation**

When a trouble condition occurs (such as wiring for a point is cut or AC power fails), the keypad sounder activates briefly approximately every six seconds. The Trouble indicator lights and the keypad shows the highest priority trouble. Press ACK to acknowledge the trouble. To view and acknowledge additional system or point troubles, press NEXT repeatedly.

**Fire Supervisory operation**

When a supervisory condition occurs, the sounder activates briefly approximately every six seconds. The Supervisory indicator lights and the keypad shows a fire supervisory message. Press ACK to acknowledge the supervisory condition. To view and acknowledge point supervisory conditions, press NEXT repeatedly.

**Silence and reset**

- Alarm or Trouble silence. Press SILENCE and enter your passcode.
- Detector reset. Press RESET and enter your passcode (if required). You can also use [CMD][4][7], or the Menu to reset detectors.
This keypad is a system controller and annunciator. The illuminated keypad has a 16-character vacuum fluorescent display (VFD) and a sounder that emits distinct condition tones to alert you to fire alarm, fire trouble, or fire supervisory events as they occur. In conjunction with the VFD and the sounder, four status LEDs provide the following system status indications: Fire, Silenced, Supervisory, and Trouble.

Required: Mount this document in view of the fire keypad.

**Overview**

**Status indicators**
- The Status indicators provide a quick visual reference of the system status.
- **Fire**: Lights when a fire alarm condition exists; turns off when all fire alarm points return to normal.
- **Silenced**: Lights after a fire alarm is silenced; turns off when a PIN and ESC is entered. This clears the alarm or trouble memory from the keypad display, when all points are in a normal state.
- **Supervisory**: Lights when any point programmed as supervisory is not normal; turns off when all supervisory points return to normal.
- **Trouble**: Lights when any system trouble or point trouble exists; turns off when the system and all points return to normal.

**Alphanumeric display**

**Built-in sounder**
- The built-in sounder emits the following warning tones:
  - **Fire signal**: pulsed, high-pitched bell tone during fire alarm.
  - **Trouble signal**: two-tone warble during a trouble event.
  - **Invalid key buzz**: buzz tone when invalid key is pressed.
  - **Keypad encoding tone**: muted beep tone as each key is pressed.

**Number keys**
- Use one or two in combination with the COMMAND bar to perform a function, or use to enter a PIN before pressing the ENT key.

**COMMAND bar**
- Use in combination with one or two numeric keys to perform a function.

**Operation**

**Normal operation**
- When the system is operating normally and is disarmed, the display shows the programmed idle text. The default system normal message is *FIRE SYSTEM*.

**Fire Alarm operation**
- When an alarm occurs, the Fire LED activates, and the keypad emits a pulsing high-pitched fire tone. The tone sounds for a pre-programmed length of time. A display message appears that describes the first point that entered an alarm. Press the NEXT key to acknowledge the alarm. To view and acknowledge additional points that are in alarm, press NEXT repeatedly.
- The display shows Ax ## FIRE ALARM (x = the area number; ## = the number of fire alarms in Area x).

**Fire Trouble operation**
- When a trouble condition occurs (such as wiring for a point is cut, AC power fails, and so on), the keypad sounder activates briefly approximately every six seconds. The Trouble LED illuminates and Ax ## FIRE TRBL or the highest priority system trouble appears in the display. Press the NEXT key to acknowledge the trouble. To view and acknowledge additional system or point troubles, press NEXT repeatedly.

**Fire Supervisory operation**
- When a supervisory condition occurs, the sounder activates briefly approximately every six seconds. The Supervisory LED illuminates and Ax ## FIRE SUPV appears in the display. Press the NEXT key to acknowledge the supervisory condition. To view and acknowledge point supervisory conditions, press NEXT repeatedly.

**Silence and reset**
- **Alarm silence**: Enter PIN (if required) and press ENT.
- **Trouble silence**: Press the COMMAND bar and select 4.
- **Detector reset**: Press the COMMAND bar and select 4 + 7.
- **Annunciating reset**: Enter PIN (if required) and press ESC. This clears alarm or trouble memory from the keypad display, when all points are in a normal state.
This keypad is a system controller and annunciator. The illuminated keypad has a 16-character vacuum fluorescent display (VFD) and a sounder that emits distinct condition tones to alert you to fire alarm, fire trouble, or fire supervisory events as they occur. In conjunction with the VFD and the sounder, four status LEDs provide the following system status indications: Fire, Silenced, Supervisory, and Trouble.

Required: Mount this document in view of the fire keypad.

**Overview**

**Status indicators**
The Status indicators provide a quick visual reference of the system status.

- **Fire:** Lights when a fire alarm condition exists; turns off when all fire alarm points return to normal.
- **Silenced:** Lights after a fire alarm is silenced; turns off when a PIN and ESC is entered. This clears the alarm or trouble memory from the keypad display, when all points are in a normal state.
- **Supervisory:** Lights when any point programmed as supervisory is not normal; turns off when all supervisory points return to normal.
- **Trouble:** Lights when any system trouble or point trouble exists; turns off when the system and all points return to normal.

**Alphanumeric display**
The alphanumeric display displays text, numerical codes, and symbols.

**Built-in sounder**
The built-in sounder emits the following warning tones:
- **Fire signal:** Pulsed, high-pitched bell tone during fire alarm.
- **Trouble signal:** Two-tone warble during a trouble event.
- **Invalid key buzz:** Buzz tone when invalid key is pressed.
- **Keypad encoding tone:** Muted beep tone as each key is pressed.

**Function keys**
Use one or two in combination with the COMMAND bar to perform a function, or use to enter a PIN before pressing the ENT key.

**Navigation keys**
Use ESC/Menu to enter the command menu, to complete a command entry, or to return to idle text.
Use PREV to return to the previously viewed menu item.
Use NEXT/Acknowledge to acknowledge an alarm or off-normal condition, or to move to the next menu item.
Use ENT to complete a PIN entry, or to select a menu item.

**Operation**

**Normal operation**
When the system is operating normally and is disarmed, the display shows the programmed idle text. The default system normal message is "FIRE SYSTEM".

**Fire Alarm operation**
When an alarm occurs, the Fire LED activates, and the keypad emits a pulsing high-pitched fire tone. The tone sounds for a pre-programmed length of time. A display message appears that describes the first point that entered an alarm. Press the NEXT key to acknowledge the alarm. To view and acknowledge additional points that are in alarm, press NEXT repeatedly.

**Fire Trouble operation**
When a trouble condition occurs (such as wiring for a point is cut, AC power fails, and so on), the keypad sounder activates briefly approximately every six seconds. The Trouble LED illuminates and Ax ## FIRE TRBL or the highest priority system trouble appears in the display. Press the NEXT key to acknowledge the trouble. To view and acknowledge additional system or point troubles, press NEXT repeatedly.

**Fire Supervisory operation**
Fire Supervisory Operation. When a supervisory condition occurs, the sounder activates briefly approximately every six seconds. The Supervisory LED illuminates and Ax ## FIRE SUPV appears in the display. Press the NEXT key to acknowledge the supervisory condition. To view and acknowledge point supervisory conditions, press NEXT repeatedly.

**Silence and reset**
Alarm silence. Press the Alarm Silence key to silence a fire alarm.
Trouble silence. Press the Trouble Silence key to silence a fire trouble.
Detector reset. Press the Detector Reset key to reset detection devices.
Annunciating reset. Press the Annunciator Reset key to clear all alarm, trouble, and supervisory messages when all points are in a normal state.
# 12 Specifications

## Control panel power supply specifications

<table>
<thead>
<tr>
<th>Voltage input (power supply)</th>
<th>Primary Terminals 1 and 2</th>
<th>16.5 VAC 40 VA class 2 plug-in transformer (D1640)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Secondary Terminals 4 and 5</td>
<td>Use 12 VDC sealed lead-acid rechargeable battery (7 Ah, 18 Ah, or 38 Ah). The control panel supports up to 38 Ah of battery. If you use two batteries, they must have the same capacity and you must connect them using the D122/D122L.</td>
<td></td>
</tr>
</tbody>
</table>

### Current requirements

Control Panel: Idle 190 mA; Alarm 265 mA

Refer to the Current Rating Chart for Standby Battery Calculations section in the Control Panels (B9512G/B8512G) Installation and System Reference Guide for the current draw requirements of other system components.

### Power outputs

All external connections are power-limited except battery terminals.

<table>
<thead>
<tr>
<th>Continuous Power Outputs</th>
<th>1.4 A maximum at 12.0 VDC nominal (continuous supply) total for all devices and outputs including the ZONEX connection, the plug-in module connector, and Terminals 3, 26, and 30.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Alarm Power Output</td>
<td>2.0 A maximum (1.4 A max for commercial fire) at 12.0 VDC nominal output for all devices and outputs including the ZONEX connection, the plug-in module connector, and Terminals 3, 6, 7, 26, and 30. Output can be steady or one of three pulsed patterns depending on programming. Refer to Relays in the RPS Help or in the Installer Services Portal programming tool (available in Europe, Middle East, Africa, and China) Help.</td>
</tr>
<tr>
<td>Switched Aux Power</td>
<td>Terminal 8 1.4 A maximum at 12.0 VDC nominal output. Continuous output is interrupted by Sensor Reset or alarm verification depending on programming. Refer to Relays in the RPS Help, in the Installer Services Portal programming tool (available in Europe, Middle East, Africa, and China) Help, or in the Control Panels (B9512G/B8512G) Program Entry Guide.</td>
</tr>
<tr>
<td>Fire and Fire/Burglary Systems</td>
<td>To comply with UL 985 and 864 listing standards for fire alarm systems (effective March 1, 1989), the total combined continuous and alarm current draw for the system during alarm conditions must be limited to 1.4 A provided by the primary power supply (rectified AC). If current draw for the system exceeds 1.4 A, remove connected devices until the current draw falls below 1.4 A. Then, connect the removed devices to an external power supply(^1) (such as B520).</td>
</tr>
</tbody>
</table>

\(^1\) Requires a UL Listed power supply.

### Minimum operating voltage

10.2 VDC

<table>
<thead>
<tr>
<th>SDI bus</th>
<th>SDI bus A: 9 VDC 4572 m (15000 ft) maximum</th>
</tr>
</thead>
<tbody>
<tr>
<td>SDI bus B: 9 VDC 4572 m (15000 ft) maximum</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>SDI2 bus</th>
<th>SDI2 bus A: 12 VDC nominal (7500 ft) maximum(^2)</th>
</tr>
</thead>
</table>

\(^2\)Requires a UL Listed power supply.
### Control panels

#### SDI2 bus B:

- 12 VDC nominal (7500 ft) maximum

#### Network

- Built-in 10/100 Ethernet LAN (RJ-45 connector)

#### USB

- USB 2.0 full speed

#### Environmental

- **Temperature:** 0°C to +49°C (+32°F to +120°F)
- **Relative Humidity:** Maximum 93% non-condensing

#### Arming stations

- B940W, B942/B942W, B930, B921C, B920, B915/B915I, D1260, D1257RB, D1256RB, D1255/D1255RB, Keyswitch

### Point thresholds

#### (Single EOL resistor circuit style)

**On-board points 1 to 8**

- With 1.0 kΩ resistors
  - **Open:** 3.7 to 5.0 VDC
  - **Normal:** 2.0 to 3.0 VDC
  - **Short:** 0.0 to 1.3 VDC
  - **Short circuit current:** 5 mA

- With 2.0 kΩ resistors
  - **Open:** 4.1 to 5.0 VDC
  - **Normal:** 3.0 to 4.1 VDC
  - **Short:** 0.0 to 3.0 VDC
  - **Short circuit current:** 5 mA

- No EOL
  - **Open:** 2.6 to 5.0 VDC
  - **Short:** 0.0 to 2.4 VDC
  - **Short circuit current:** 5 mA

#### (Dual EOL on-board points)

- Dual EOL (1.0 kΩ + 1.0 kΩ)
  - **Open:** 0 to 1.67 VDC
  - **Normal:** 1.69 to 2.94 VDC
  - **Fault:** 2.95 to 4.10 VDC
  - **Short circuit current:** 5 mA

### Compatible enclosures

- B8103 Universal Enclosure, D8103 Universal Enclosure, D8109 Fire Enclosure, D8108A Attack Resistant Enclosure, BATB-40 and BATB-80 Battery Boxes.
