B Series Control Panels to protect home and family

**BOSCH**

Invented for life

## **B**:more:secure

Get more for your security investment. Your home is one of your most important assets, and you want the most value from your security system. B Series control panels give you more with a flexible, integrated security solution for intrusion and fire detection that is easy to use and can even be operated from your smart phone.

## **B**:more:at ease

Each control panel works around the clock checking for open windows and doors, monitoring smoke detectors and performing other services to keep your home and family secure. It provides safeguards against fire, carbon monoxide (CO) gas, burglars, vandalism, and more.

When changes are detected, the control panel sends event notifications—such as alarms, or temperature or CO gas level warnings—directly to your email or mobile phone, ensuring you are always up to date on the status of your home. Keep an eye on your family and property, even when you are not there.

## **B**:more:personal

You determine the security plan that fits best with your family's activities and schedules. You can control individual rooms or up to six distinct areas of your home or property—turn on or off a guest area, sun room, kitchen or detached garage without affecting other rooms. Secure the front of the house while you enjoy the backyard. The system can even signal you when your child arrives home from school.

## B:more:intuitive

Customize the system to your needs, and simplify your life. Set the system to turn on the first floor when you go to bed. Program a scheduled event to ensure your garage door is closed at a pre-set time each night. You can program the system to carry out multiple functions with a single keypad command.

Bosch keypads guide you through system control with just a few simple steps. Or, turn the system on or off with a wireless keyfob—making access easy when your hands are full, you are in a hurry, or you have limited strength or mobility.

Convenient Wireless Keyfob

## B:more:aware

See what is happening at your home from a remote desktop, smart phone, or tablet. Anything that creates an event or alarm in the panel can trigger camera actions. For example, get a video snapshot sent to your email anytime the system is turned on or off. Or use the video motion detection capabilities built in to Bosch IP cameras to trigger an event or alarm where traditional detectors aren't feasible—like whenever someone enters the backyard. You get more information about what is happening at your home and about the safety and security of your family.

## B:more:connected

Use your home's Internet connection to send reports to the alarm monitoring company, eliminating the need for a phone line and reducing your costs. The control panel supports both current and future Internet Protocols to ensure your investment is protected as technology changes. Or, you can use a cellular transmitter for complete wireless communication. With plug-in modules, you have the flexibility to choose the connection that works best with your home's existing technology.

## B:more:automated

Combine the control panel with the G100 Z-Wave Home Control Gateway, to connect Z-Wave devices—such as lighting controls, door locks, temperature sensors, and more—for home automation and remote monitoring. Automatically turn on the security system when you

lock the door. Use your smart phone or tablet to turn on the lights and adjust the thermostat before you arrive home. View still images or live video to verify all is safe and secure. Stay informed even when you are miles away.

## B:more:reliable

Bosch employs the highest standards to ensure quality and performance. Each control panel has also passed rigorous testing by Underwriters Laboratory (UL/ULC), an independent product safety testing and certification organization.

## B:more:confident

Invest in a B Series panel and get more for your home and your family.

## **A Tradition of Quality and Innovation**

For 125 years, the Bosch name has stood for quality and reliability. Bosch is the global supplier of choice for innovative technology, backed by the highest standards for service and support.

Bosch Security Systems proudly offers a wide range of security, safety, communications and sound solutions that are relied upon every day in applications around the world, from government facilities and public venues to businesses, schools and homes.
