

## Integrated Security Solutions

### Intrusion Panel with Integrated IP Video

**BOSCH**

Invented for life

The need for video alarm verification to reduce false alarms and provide appropriate response continues to grow. End users are also looking for simple ways to interact with their systems and see inside their home or business from their desktop or from a smart phone.

Most systems available today require a third-party server or a cloud-based service. This can add complexity as well as additional costs for both the end user and installer.

#### **An intelligent solution**

With Bosch intrusion to video integration, there is no server required. The control panel treats the camera as an integrated device and provides commands directly via a local area network. This eliminates the need for a third-party server and reduces costs.

B Series and G Series panels integrate with Bosch IP cameras, allowing the camera's video motion detection to activate points on the panel and panel events to trigger camera actions, including sending video snapshots via e-mail. This provides an easy path toward video alarm verification.

## One app for system control

Remote Security Control enables users to view live video or still images from Bosch IP cameras integrated with the panels. It also allows users to turn on or off systems or areas as well as control connected outputs—including lights, garage doors, and more.

Features	Benefits
Alarm verification	Receive video snapshots via email or text message from intrusion events, such as burglary and hold-up
Latch-key	See images of who turned off the system to ensure that a child has returned home safe or an employee has opened the store at the correct time
Video motion detection reporting	Use video motion detection built into the Bosch IP camera as an intrusion alarm to activate the local sounders and keypads, send a report to the central station receiver, or send text messages to up to 16 recipients
Video event/intrusion event synchronization	Correlate intrusion alarm events with recorded video by activating a camera alarm from the intrusion system. Reduce nuisance reporting by sending video only when the system is turned on or during a specific time window

**Make the most out of intrusion detection and video surveillance.** Verify alarms and deliver new services to end users with video snapshot alerts of system events sent right to their smart phones.

Combining the modern capabilities of B Series and new G Series control panels with up to 16 Bosch IP cameras provides a seamless, cost-effective total security solution.
