DICENTIS incorporates several standardized technologies that have been combined to create an open platform. Complete system solutions can be created by simply integrating compatible products. This makes DICENTIS extremely scalable, enabling it to evolve with the growing needs of meeting and conference facilities. At its heart, the DICENTIS Conference System makes use of the unique IP based OMNEO media networking architecture, developed by Bosch.

The elegantly designed DICENTIS Discussion devices enable participants to speak, register a request to speak, and listen to discussion.

The DICENTIS Discussion with touchscreen has a 4.3 inch touch screen and is completely software upgradable. It has lots of features including independent dual-use for language selection and voting. A simple software setting enables two participants to share a device and listen to proceeding in two different languages. Separate votes can also be cast on a shared device.

The 4.3 inch capacitive touch screen informs participants of the proceedings and increases meeting efficiency by displaying the current speaker and delegates in the request list. Available interpreted languages and voting information can also be displayed.
