

DCNM-LIMS Interpreting multiple sources license

DICENTIS

- ▶ Enables interpreted languages from multiple sources seamlessly
- ▶ Enables interfacing DICENTIS with remote interpreting systems
- ▶ Exchange of interpretation quality index between local and remote interpreting systems

Extending DICENTIS Interpreting preparation and management module (DCNM-LIPM) with DICENTIS Interpreting multiple sources module (DCNM-LIMS) creates the possibility of providing languages from multiple sources. Up to 100 languages can be delivered using the local DICENTIS Interpreter desk as well as an external system.

This functionality allows for interfacing with remote interpreting systems, and for solutions where interpreter desks are located in multiple rooms. The remote system is able to provide the auto-relay language to which all local DICENTIS Interpreter desks will switch to, as well as exchanging the source language to show the correct interpretation quality index (flr, +, -, --) in the system.

Functions

This DICENTIS license enables technicians to:

- Configure via the Meeting application or the .NET API Booth-Desk combinations with an OMNEO or a Dante™ stream as source.
- Configure which Booth(s) provide the auto-relay language so that all local interpreters automatically switch to that language.

This DICENTIS license enables operators to:

- See if a language is provided by a local interpreter desk or by an external system.

- Control the remote interpreter desks (when implemented on the remote system). The DICENTIS license enables integrators to:
- Create a remote interpreting solution using the .NET API or the Conference protocol for control, and the Dante™ unicast or multicast streams for the audio.

Parts included

Quantity	Component
1	E-mail with license activation information.
