

DCNM-LIPM Interpreting prepare and manage license

DICENTIS

- ▶ Enables configuration and management of the interpreter desk via the Meeting application or the API
- ▶ Enables different interpretation configurations for each meeting

This software license enables the configuration and management of the interpreter desk via the Meeting application or the API. Without the DCNM-LIPM license, the interpreter desk can only be configured on the desk itself.

Functions

The ‘DICENTIS Interpreting prepare and manage license’ enables technicians to:

- Configure interpreter seats from the Meeting application or via the API (assign seats to booths, assign languages to desks, general settings for the microphone modes between or within the booth, such as merge, interlock or override, show an ‘engaged indication’ within the booth, and show a red blinking microphone button when multiple interpreters are active).
- Set the interpretation language for the system.
- Configure different interpretation settings per meeting.
- Configure which booths can supply an auto-relay language to output B.
- Control the interpreter desks using Synoptic control or the Conference protocol.

- Retrieve interpretation status like booth, desk, and languages via the Conference protocol.

Parts included

Quantity	Component
1	E-mail with license activation information.
