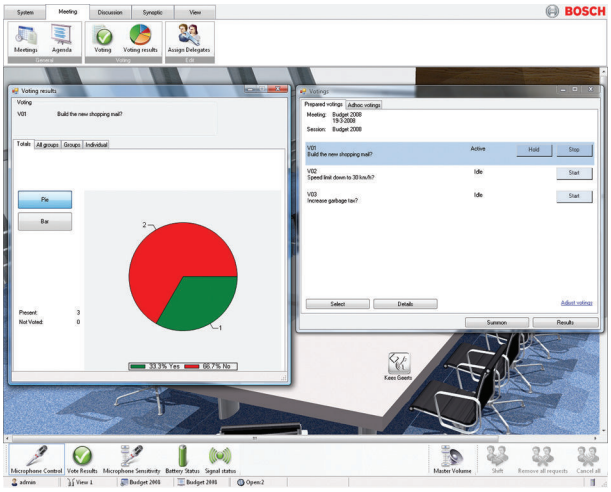
DCN-SWMV Conference Software Multi Voting

www.boschsecurity.com

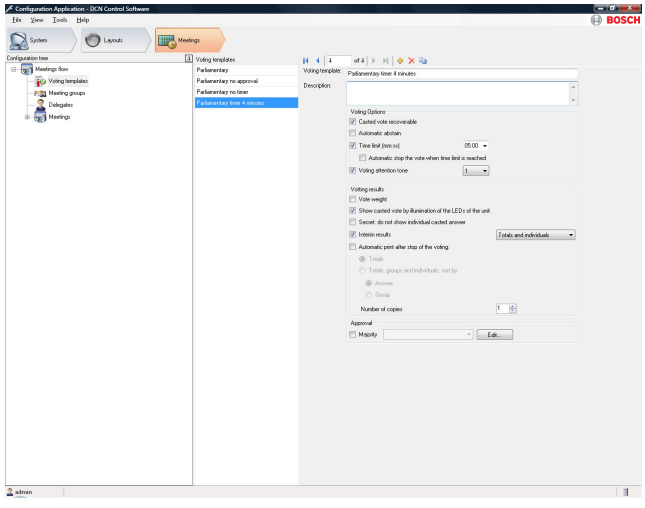
BOSCH
Invented for life



- Complete operator control of parliamentary, opinion poll and audience response voting sessions
- Extensive motion preparation facilities
- Output voting results to printers
- Wide range of vote related parameter options

The DCN-SWMV Conference Software Multi Voting is a software module designed to control and to prepare parliamentary, opinion poll and audience response voting.

Functions



Vote preparation

Applications
The software covers a number of functions including vote preparation, specifying vote-related parameters, and starting and controlling voting.

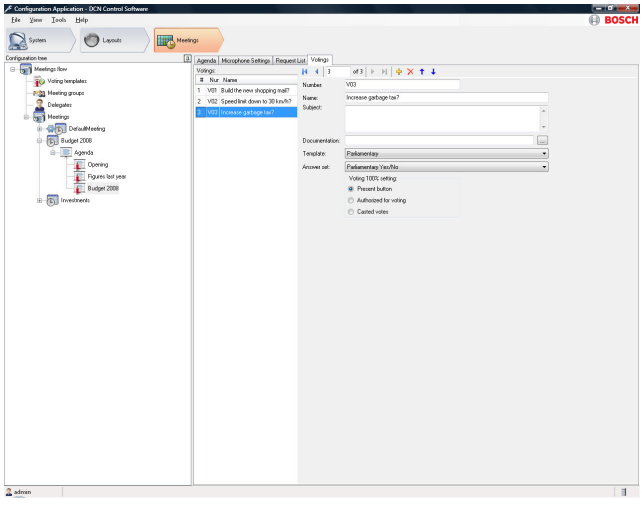
In the configuration application voting is prepared as in the operator application the voting can be started and results can be shown.

Voting
Voting is an optional part of every agenda entry. Voting can consist of a number of proposals or motions, each of which will be voted on.
The preparation of the voting is done in two steps. First a template needs to be defined. The template contains more general settings like automatic print, secret, majority and many more. Secondly a single vote can be created. Now the number, name subject, template and answer set must be defined. Also a link to a document can be defined which can be activated from the operator application. This document can be used as extra information for a specific vote.

Parliamentary voting
In a Parliamentary voting, participants vote about a motion. They can agree (Yes), disagree (No) or stay neutral (Abstain). They can also not vote at all (Not voted). A special type of parliamentary vote is with DNPV as a forth option. DNPV means that the delegate doesn't want to participate in the vote.

Audience Response voting
In an audience response voting, participants give their opinion about a statement. They use a rating system to indicate how much they agree with the statement. There are five possible answers: Very much against (--), Against (-), Neutral (0), For (+) and Very much for (++).

Opinion Poll
In an opinion poll, participants choose from a number of 5 answers: 1, 2, 3, 4 and 5.



Voting template

Operator
The operator selects the desired vote from the prepared voting list and starts the vote; participants can use their units to register votes. The operator has full control over the voting procedure, and can stop or suspend a vote at any time. It is also possible to start a vote which is not prepared before (ad-hoc voting).

Display
The software program offers the possibility of displaying cast answers and the final result of a vote on the PCs screens. Optional delegate units with a display facility can display the vote results. There is also a facility of automatically print-out the vote results once the vote is completed.

Ordering information

DCN-SWMV Conference Software Multi Voting
Can only be used in combination with DCN-SW. DCN-SWDB is required if individual vote results are required.
Order number **DCN-SWMV**

DCN-SWMV-E Conference Software Multi Voting E-code
Can only be used in combination with DCN-SW. DCN-SWDB is required if individual vote results are required. Electronic authorization code.
Order number **DCN-SWMV-E**

DCN-SW Conference Software Main Module
A platform on which all other Conference software modules run.
Order number **DCN-SW**

DCN-SW-E Conference Software Main Module E-code
A platform on which all other Conference software modules run. Electronic authorization code.
Order number **DCN-SW-E**

DCN-SWDB Conference Software Delegate Database
Can only be used in combination with DCN-SW.
Order number **DCN-SWDB**

DCN-SWDB-E Conference Software Delegate Database E-code
Can only be used in combination with DCN-SW. Electronic authorization code.
Order number **DCN-SWDB-E**
