The DCN-SWMV-E Multi voting license is a software module designed to control and to prepare parliamentary, opinion poll and audience response voting.

**Functions**

- Complete operator control of parliamentary, opinion poll and audience response voting sessions
- Extensive motion preparation facilities
- Output voting results to printers
- Wide range of vote related parameter options

**Applications**

The software covers a number of functions including vote preparation, specifying vote-related parameters, and starting and controlling voting. In the configuration application voting is prepared as in the operator application the voting can be started and results can be shown.

**Voting**

Voting is an optional part of every agenda entry. Voting can consist of a number of proposals or motions, each of which will be voted on. The preparation of the voting is done in two steps. First a template needs to be defined. The template contains more general settings like automatic print, secret, majority and many more. Secondly a single vote can be created. Now the number, name subject, template and answer set must be defined. Also a link to a document can be defined which can be activated from the operator application. This document can be used as extra information for a specific vote.

**Parliamentary voting**

In a Parliamentary voting, participants vote about a motion. They can agree (Yes), disagree (No) or stay neutral (Abstain). They can also not vote at all (Not
A special type of parliamentary vote is with DNPV as a forth option. DNPV means that the delegate doesn’t want to participate in the vote.

**Audience Response voting**
In an audience response voting, participants give their opinion about a statement. They use a rating system to indicate how much they agree with the statement. There are five possible answers: Very much against (–), Against (–), Neutral (0), For (+) and Very much for (++).

**Opinion Poll**
In an opinion poll, participants choose from a number of 5 answers: 1, 2, 3, 4 and 5.

**Voting template**

**Operator**
The operator selects the desired vote from the prepared voting list and starts the vote; participants can use their units to register votes. The operator has full control over the voting procedure, and can stop or suspend a vote at any time. It is also possible to start a vote which is not prepared before (ad-hoc voting).

**Display**
The software program offers the possibility of displaying cast answers and the final result of a vote on the PCs screens. Optional delegate units with a display facility can display the vote results. There is also a facility of automatically print-out the vote results once the vote is completed.
