

DCN-SWSI-E Simultaneous interpretation license

www.boschsecurity.com

BOSCH
Invented for life

- ▶ Operator control of interpreter microphones
- ▶ Configure and control interpretation facilities
- ▶ Monitor interpreter activities
- ▶ Adjust individual microphone sensitivity of interpreter desks

The DCN-SWSI-E Simultaneous Interpretation software module is essential for international conference venues. The simultaneous interpretation software module is used to prepare simultaneous interpretation, control facilities and monitor interpreter activities during a conference. It accommodates 31 interpreter booths, each with up to 6 interpreter desks.

Functions

Configuration application

In the configuration application, the operator defines the maximum number of system channels to be used for interpretation.

The operator can prepare the interpretation settings for each meeting. These settings consist of the following: number of interpretations, language channel names, interpreter microphone interlock mode, enabling / disabling of speak slowly, and floor distribution.

Icons representing the interpreter desk and the booths can be placed on the synoptic layout for controlling and status information.

Operator application

The operator can view the status of the interpretation in two ways. One is the Interpretation Distribution status list. This list is an overview of all interpretation languages, and contains the following: channel number, translating booth and desk number, and channel quality.

Operators may also use the synoptic layout, which features interpreter desk and booth icons. The operator may control the microphone and microphone sensitivity of interpreter desks via the synoptic layout.

Parts included

Quantity	Component
