Intelligent Video Analytics (IVA) Pro is an expert suite of video analytics that delivers valuable insights for improved efficiency, simplicity, security, and safety. With IVA Pro, an AI-driven video analytics software, Bosch supports security professionals, consultants, specifiers, and end-users on their journey towards predictive solutions.

System overview
IVA Pro is available as:
- IVA Pro Buildings
- IVA Pro Perimeter
- IVA Pro Traffic
- IVA Pro Intelligent Tracking
IVA Pro is ideal for the following scenarios:

<table>
<thead>
<tr>
<th>IVA Pro Buildings</th>
<th>IVA Pro Perimeter</th>
<th>IVA Pro Traffic</th>
<th>IVA Pro Intelligent Tracking</th>
</tr>
</thead>
<tbody>
<tr>
<td>General surveillance</td>
<td>Base tracking (2D)</td>
<td>Traffic tracking (3D)</td>
<td>Auto mode</td>
</tr>
<tr>
<td>Indoor and outdoor people counting</td>
<td>Perimeter tracking (2D)</td>
<td></td>
<td>Click mode</td>
</tr>
<tr>

Functions

Tracking modes
The following tracking modes are available:

- IVA Pro Buildings
- Base tracking (2D)
- IVA Pro Perimeter
- Perimeter tracking (2D)
- Perimeter tracking (3D)
- People tracking (3D)
- Museum mode (2D)
- Ship tracking (2D)
- IVA Pro Traffic
- Traffic tracking (3D)
- IVA Pro Intelligent Tracking
- Auto mode
- Click mode

Object classes
The following object classes are available:

- IVA Pro Buildings
- Person
- Vehicle
- IVA Pro Perimeter
- Person
- Bike
- Car
- Truck
**Alarm and statistic tasks**

The following alarm and statistic tasks are available:

- Detect objects within, entering, or leaving a single or multiple (up to three) defined detection zones in specified sequence or timing
- Detect multiple line crossings from a single line up to three lines combined in specified sequence or timing
- Detect objects traversing a route
- Detect loitering in an area related to radius and time
- Detect objects that have started or stopped moving
- Detect left or removed objects (IVA Pro Perimeter only)
- Detect objects with properties, such as size, speed (IVA Pro Perimeter and IVA Pro Traffic only), direction, and aspect ratio, that change within a configured time according to specification
- Count objects crossing a virtual line
- Count objects within an area and alarm if a predefined threshold is reached
- Combine tasks using scripts

**Filters**

IVA Pro can be configured to ignore specified image areas and small objects to enhance robustness. Furthermore, object size, two-way direction, aspect ratio, color, and speed (IVA Pro Perimeter and IVA Pro Traffic only) filters can be used in any combination to create specific detection rules for objects. Statistics on object properties are stored and can be displayed for fine-tuning the object filters. Object properties can also be defined by selecting an appropriately similar object in the video.

**Real-world size, speed, and location**

IVA Pro Perimeter and IVA Pro Traffic include the calibration possibility to transform 2D pixels into 3D real-world measures, including size, speed, and geolocation of objects for tracking use cases.

**Intelligence-at-the-edge concept**

The intelligence-at-the-edge technology allows users to reduce bandwidth and storage in the absence of action and switch back to full image quality in case of video analytics alarms. Alarm conditions can be signaled by a relay output on the unit or an alarm connection to stream video to a decoder, a roadside unit (IVA Pro Traffic), or a video management system. Alarms can also be transmitted to a video management system to start extended alarm scenarios. As well as creating alarms, IVA Pro produces metadata describing the content of the analyzed scene. This metadata is sent over the network and may also be recorded with the video stream or used independently of the video stream.

**Forensic search**

The recorded metadata can be used for a full forensic search in which the rules can be changed within Bosch Video Management System (BoschVMS), even after the fact. New tasks can be defined and adapted for each search, and the recorded metadata is then scanned and evaluated accordingly. Forensic search is very time efficient and can scan a huge recording database for events within seconds.

**Intuitive graphical user interface**

The setup is available via the Configuration Manager. A wizard-based graphical user interface guides the user through the configuration. It provides all the necessary tools to set up IVA Pro and specify detection or counting tasks. All configuration options are visualized as feedback overlays and can be edited directly for intuitive configuration.

When movement is detected, the object is outlined in yellow on the display and its motion is displayed as a green trajectory. If an object and its motion match the rule conditions defined for one of the detector tasks, an alarm is created and the object outlines change to red. Additionally, an idle object is marked with [I] and a removed object is marked with [X].

**Configuration**

With minimal configuration, the following detection and alarm scenarios are possible:

| IVA Pro Buildings | Detects upright persons and vehicles and alarms on any object in the scene while suppressing any other objects or motion, with minimal configuration and without calibration. Select a task and mark the area of interest in the image. Up to 64 objects can be tracked in real time. |
IVA Pro Perimeter
Detections and alarms on any moving object in the scene. To achieve the best performance with respect to detection rate, detection distance, and false alarm resistance, add calibration and switch to 3D processing.

IVA Pro Traffic
Detects pedestrians, bicycles, motorcycles, cars, trucks, and buses and alarms on any object in the scene while suppressing any other objects or motion such as shadows, headlamps, and changing weather conditions. Select a task and mark the area of interest in the image. Camera calibration and switching to Traffic (3D) tracking mode enables speed data and geolocation of all objects. Up to 64 objects can be tracked in real time.

IVA Pro Intelligent Tracking
Detects objects or persons and can automatically activate the Intelligent Tracking feature, which controls the pan/tilt/zoom actions of the camera to track objects or persons and keep them in view.

Scenario defaults provide example configurations for the most common tasks. More complex setups are also supported: Up to 16 independent tasks can be set up in the GUI, and the alarm objects for each task can be restricted according to their properties. A task script editor is available for fine-tuning and combining predefined tasks.

Assisted calibration for IVA Pro Perimeter and IVA Pro Traffic
The calibration uses internal sensors from the camera and user input. User input can be given by marking ground points on a map or by measuring heights and distances on the ground, for example, by marking a person walking through the scene. The calibration tool guides users through all necessary steps. It supports calibration from recordings, allowing a person to walk through the scene and be used as a known reference in the calibration process afterwards.

IVA Pro Buildings does not need calibration.

Technical specifications

Compatibility
For information on supported cameras, refer to the Bosch Video Product Selector: www.videoselector.boschsecurity.com
Configure IVA Pro with Configuration Manager, a free software available for download from the Bosch website: https://downloadstore.boschsecurity.com/

Ordering information

IVA Pro Buildings
Free of charge video analytics software based on deep neural network technology for intrusion detection and operational efficiency in and around buildings.
Order number MVC-IVA-BLD | F.01U.409.536

IVA Pro Perimeter
Video analytics software for mission-critical perimeter protection.
Order number MVC-IVA-PER | F.01U.409.537

IVA Pro Traffic
Video analytics software based on deep neural network technology for traffic monitoring and Automatic Incident Detection.
Order number MVC-IVA-TRA | F.01U.409.538

IVA Pro Intelligent Tracking
AI-based Intelligent Tracking and video analytics while the camera is moving for applications in crowds and traffic scenes
Order number MVC-IVA-IT | F.01U.412.107
