Release Letter

Products:	<i>Combined Firmware for CPP7.3 UHD/HD/MP cameras CPP7 HD/MP cameras CPP6 UHD/MP cameras CPP5 encoders CPP4 HD cameras CPP3 cameras and encoders CPP-ENC H.264 encoders</i>
Version:	7.86.1219

This letter contains latest information about the above mentioned firmware version.

1 General

This firmware release is a combined firmware package, applicable to H.264 and H.265 products based on one of the following platforms.

Changes since last release are marked in [blue](#).

Firmware release 7.84 is the last feature release for CPP6, CPP7 and CPP7.3 cameras. Firmware will be maintained for field and security issues.

From

This firmware supports:

- CPP7.3 HD and UHD cameras
 - upgrade from FW < 6.50 to intermediate FW 6.50
 - [upgrade from FW 6.50 \(<6.51\) to latest FW 7.86](#)
- CPP7 HD cameras
 - upgrade from FW < 6.50 to intermediate FW 6.50
 - [upgrade from FW 6.50 \(<6.51\) to latest FW 7.86](#)
- CPP6 UHD cameras
 - upgrade from FW < 6.50 to intermediate FW 6.50
 - [upgrade from FW 6.50 \(<6.51\) to latest FW 7.86](#)
- CPP5 encoders
 - upgrade from FW 5.91 or newer to latest FW 6.31
- CPP4 HD cameras
 - upgrade from FW < 6.10 to intermediate FW 6.11
 - upgrade from FW < 6.50 to intermediate FW 6.50
 - upgrade from FW 6.50 (<6.51) to latest FW 7.10
- CPP3 cameras and encoders
 - upgrade from FW 4.54.0026 or newer to latest FW 5.75
- CPP-ENC encoders and decoders
 - VIP-X1600-XFM4 encoders: upgrade from FW 4.2x or newer to latest FW 5.54
 - VJT XF, VJD-3000 and VJC-7000 upgrade to latest FW 5.97

The combined firmware package includes the following build versions:

- [CPP7.3 FW 7.86.0019](#)
- CPP7.3 FW 6.50.0133
- [CPP7 H.264 7.86.0019](#)
- CPP7 H.264 6.50.0133
- [CPP6 H.264 7.86.0019](#)
- CPP6 H.264 6.50.0133
- CPP5 H.264 6.31.0010
- CPP4 H.264 7.10.0096
- CPP4 H.264 6.50.0133
- CPP4 H.264 6.11.0026
- CPP3 H.264 5.75.0011
- CPP-ENC H.264 5.97.0013 for VJT XF family, VJD-3000 and VJC-7000
- CPP-ENC H.264 5.54.0012 for VIP X1600 XFM4

For detailed description please refer to the separate release letters.

2 Important notes:

2.1 *Intermediate update steps*

To upgrade to a newer firmware version using this combined firmware package, products may require this firmware file uploaded multiple times until the intended firmware version is installed.

Since intermediate firmware versions might have vulnerabilities that are fixed in later versions, it is advised to always install up to the most recent version.

2.2 *Two-factor authenticated firmware signature*

The security of the signature of the firmware file has been strengthened by using a two-factor authentication process for signing the final released firmware file. This new process has been prepared for with firmware 6.50 and comes into effect with succeeding versions.

The new signature protects from non-released versions being installed in production systems. As a result, pre-release (beta) versions, required sometimes in projects, need to have a special license installed prior to the firmware update. Requests for pre-release versions need to be handled via tech support tickets in order to allow tracking and require a concession signed by the customer.

In case a firmware must be downgraded from a device with firmware 6.51 or higher installed, the downgrade is only possible via firmware 6.50 with an updated signature. Please contact our customer service or technical support to get a link to this firmware.

Note:

This combined firmware file is not applicable to devices running firmware higher than FW 6.50 due to the two-factor authenticated release signature.

2.3 *Firmware file encryption*

In order to upload version 6.51 to a device running a firmware version below 6.50, you need to upgrade first to version 6.50, since older firmware versions do not support firmware file decryption. This can be achieved by uploading this firmware file multiple times until the required firmware version is installed.

2.4 *“Originally manufactured” certificate*

Since firmware version 6.30 all cameras are prepared to receive a unique Bosch certificate during production, assigned and enrolled by Escrypt LRA. These certificates prove that every device is an original Bosch-manufactured and untampered unit.

Escrypt is a Bosch-owned company, providing the Bosch certificate authority (CA).

Deployment of the certificates in production is asynchronous to this firmware release.

2.5 File System Introduction on CPP4

Due to an internal file system being introduced since firmware 6.1x and architectural changes thereof, an upgrade of CPP4 cameras to firmware 6.2x and higher is only possible from firmware 6.1x versions or higher.

CPP4 cameras with previous firmware versions below 6.1x first need to upgrade to firmware 6.1x. This can be achieved by uploading this firmware file multiple times until the required firmware version is installed.

2.6 Secure Element (“TPM”)

All applicable devices incorporate a secure microcontroller, which we call our Secure Element. “A Secure Element is a tamper-resistant platform capable of securely hosting applications and their confidential and cryptographic data (for example cryptographic keys) in accordance with the rules and security requirements set by well-identified trusted authorities.”¹ In this specific case the requirements are defined in the Trusted Platform Module library specification defined by the Trusted Computing Group (TCG). As the Secure Element supports the main functionalities specified by TCG, the ones needed for an IoT device, it is often referred to as a “TPM”.

Due to security reasons, the firmware or functionality of the secure crypto-microcontroller cannot be altered in the field.

Thus, not all new security features become available on devices with older secure crypto-microcontroller hardware or firmware revisions.

2.7 CPP5

This combined firmware cannot be applied to CPP5 products with firmware version older than 5.91. It is required to upgrade to intermediate firmware 5.91 first.

2.8 Open Source Software

Bosch Security Systems is advocate of integrating open source software into its products. The use of open source software is noted in the *Service* menu on the *System Overview* page of every camera's web interface. For general information regarding open source software in Bosch Security Systems, please visit <http://www.boschsecurity.com/oss> .

2.9 NTCIP

Cameras prepared for Intelligent Traffic System (ITS) applications support NTCIP protocol, which was updated to meet NTCIP 1205 v01 AMENDMENT 1 in November 2020 as from firmware 7.72.0008 onwards. This update may break compatibility with outdated ITS software.

4 New Features for CPP6, CPP7, CPP7.3

- The video.mp4 URL now accepts parameters to stream using RTSP, and also to access stream 2.
- The RCP command CONF_ALARM_OVERVIEW now includes recording errors and SD card mounting states.

5 Changes for CPP7.3

- An issue with reverted iris control on AUTODOME IP starlight 5100i (IR), affecting image quality, is fixed.
- An issue where an AUTODOME IP starlight 5100i (IR) might have stuck in night mode is fixed by changing the underlying behavior of the day-night switch slider:
 - Night-to-day switchover positions higher than the default value will have an increasing wait period before switching from night mode back to day mode to prevent too early switching and oscillations.
 - Night-to-day switchover positions also require a higher light level to switch than before to prevent too early switching as well.
- An issue with wrong compass direction in inverted mode is fixed.
- An issue with AUTODOME IP starlight 5000i (IR) and AUTODOME IP starlight 5100i (IR), where zoom value via ONVIF Absolute Positioning command was incorrect, is fixed.
- An issue is fixed where after updating an AUTODOME IP starlight 5100i (IR) from firmware 7.60 to 7.85 PTZ was only working after rebooting the camera twice.
- An issue is fixed where the virtual mask configuration on moving cameras was not closed when switching from configuration to live, rendering the virtual masks solid.
- An issue with MIC cameras, using the serial port (under license) with Pelco D protocol, where nothing was responded back to serial port, is fixed.
- An issue, introduced with firmware 7.85, where putting the camera in corridor mode caused continuous reboots, is fixed.
- An issue is fixed where the calibration pane is twisted on a DINION IP 3000i when put in corridor mode, hindering VCA to detect objects.

6 Changes for CPP7

- IVA detection results improved by pre-determined lens distortion models for DINION IP thermal 8000.
- An issue, introduced with firmware 7.85, where putting the camera in corridor mode caused continuous reboots, is fixed.

From

BT-VS/MKP-XPT

Product Management

Nuremberg

03.01.2023

7 Changes for CPP6, CPP7, CPP7.3

- An issue with manual iris or focus control via ONVIF is fixed.
- An issue with certain VCA events erroneously reporting 'signal loss' via ONVIF is fixed.
- Multiple vulnerabilities in 3rd party libraries that were identified during UL 2900-3-2 certification are fixed.
- An issue is fixed where 802.1x authentication failed when EAP-PEAP is requested prior to EAP-TLS.
- An issue is fixed where necessary network settings were set to default on application variant switching, now including hostname and unit name.

Please check the platform-specific [release notes of FW 7.86.0019](#) for completeness and details.

8 Restrictions; Known Issues

- This firmware and its included platform firmware builds are not applicable to MPEG-4 products.
- The final firmware version for VIP-X1600-XFM4 modules is FW 5.54. No newer firmware will be provided for these modules.
- Configuration Manager cannot upload this Combined Firmware file to VIP-X1600-XFM4 modules. Use the module's web page instead for uploading; or use the separate firmware file.
- The final firmware version for CPP3 devices is FW 5.74. No newer firmware will be provided for these products.
- The Combined Firmware file does not load onto VG4 AUTODOME or AUTODOME Easy II via the browser when running a firmware version before 5.52.0017. The specific platform file should be used instead.
- Cameras or encoders with a minimum firmware version that is higher than the lowest firmware version in the combined firmware file may show error 0x0b in the upload history which can be ignored. Firmware upload is not affected by this.
- Video authentication using SHA hashing mechanisms are not functional if no self-signed certificate has been created yet. Opening an HTTPS connection once is prerequisite.
- Cameras with security coprocessor version 3 with an externally applied certificate will fail HTTPS connections requesting SHA256. The restriction applies to all functions using the private key from the certificate, including
 - EAP-TLS with client authentication
 - TLS-Time with client authentication
 - TLS-Syslog with client authentication

With self-signed certificate, HTTPS is fully functional.

- Creating 2048 bit keys for self-signed certificates may take more than 20 seconds, extending the initial boot cycle, which may occasionally cause a timeout on the very first HTTPS connection to a camera. The next connection attempt typically is successful.
- Software sealing does not cover all static parameters of image pre-processing and moving camera control.
- If software sealing is active and SNMP is disabled in Network -> Network Services, no SNMP trap will be sent out on seal break due to the disabled service. The seal break itself is logged.
- This combined firmware file is not applicable to devices running firmware higher than FW 6.50 due to the 2-factor release signature.
- AVIOTEC firmware is not included in this combined firmware file.
- CPP4 FW 6.32 for EXTEGRA is terminated and has been removed from the combined file.

Please check the respective release letter of a camera or encoder for further device-specific restrictions.

9 System Requirements

Possible clients for configuration purposes:

- Configuration Manager 7.50 or newer
- Web Browsers:
 - Google Chrome
 - Microsoft Internet Explorer 11 or higher
 - Microsoft Edge (Chromium based)
 - Mozilla Firefox

Possible clients for operation purposes:

- Bosch Video Security App 1.2 or higher
- Bosch Video Security Client 2.0 or higher
- Web Browsers:
 - Google Chrome
 - Microsoft Internet Explorer 11 or higher
 - Microsoft Edge (Chromium based)
 - Mozilla Firefox

- DirectX 11
- MPEG-ActiveX 6.34 or newer (for IE only)
