ITS-ALINK-PLUS software is the remote programming software for compatible Bosch control panels. It provides a flexible and user-friendly interface between a PC and compatible Bosch Security Systems, Inc. (Bosch) control panels. With this software, the Bosch control panels can be programmed remotely through a modem, or directly from the PC using the Direct Link cable. Use this software to manage customer information, program customer control panels, and remotely connect to, and operate, control panels. It is easy to upload and download programming information between the control panel and the PC, obtain a visual representation of current system status, arm or disarm the system, operate various programmable outputs, and obtain reports of control panel data and journal logs. The transfer tool transfers data from older versions of A-Link software to the ITS-ALINK-PLUS software.

### Functions

**Remote Operation**

Once a valid connection is established between the PC and control panel, operators with appropriate security levels:

- Can arm or disarm the system
- Can turn sirens on or off

- Can turn various programmable outputs on or off.

**Report Capability**

The last 40 events in the control panel can be displayed and printed for a hardcopy record.

**Three Programmable Security Levels**

The system administrator (Administrator Level) can enable or disable certain ITS-ALINK-PLUS software functions for each operator by assigning a required security level to each function and a security level to each operator. Operators can only perform functions for which they have a valid security level. The available security levels are:

- **Administrator Level**: allows full access to all system configurations
- **Operator Level**: allows full access to all system configurations except print and user settings
- **Registrar Level**: allows entry of customer information only

### Installation/configuration notes

**Compatibility Information**

The ITS-ALINK-PLUS software supports the following control panels:

- ICP-CMS6-CHI v1.0 (and higher)
- ICP-CMS8-CHI v1.0 (and higher)
