D192G Notification appliance module

www.boschsecurity.com

- Supervises 12 VDC or 24 VDC notification appliance circuits (NACs)
- Supervised signal silencing switch
- Notification appliance circuit rated at 3.0 A
- Multiple module configurations
- Mounts in panel enclosure

This module is used for wiring connections to remote signaling devices. You can connect up to twelve D192G modules to the same system on compatible control panels. Wiring is supervised for open, short, or grounded circuit faults.

The module powers notification appliances from the control panel power supply or from a UL Listed auxiliary 12 VDC or 24 VDC regulated/power-limited power supply for fire protective signaling units and commercial/residential burglar units. This feature allows the system to support more signaling devices on longer wire runs. It also allows the use of 12 V or 24 V notification appliances requiring the appropriate power supply.

**Functions**

**Supervises 12 VDC or 24 VDC NACs**

The D192G powers the notification devices from either the control panel’s power supply or from a UL Listed Auxiliary 12 VDC or 24 VDC regulated power-limited power supply for use with Fire Protective Signaling Units and Commercial and Residential Burglar Units. The choice of power supply allows the use of 12 V or 24 V notification devices.

**Supervised Signal Silencing Switch**

The D192G module has a toggle switch for silencing the notification devices while testing the alarm panel. When this toggle switch is in the Silence (Off) position, the module indicates a supervisory trouble condition to the control panel.

**Multiple Module Configurations**

Several modules can be connected to the same zone or point on the control panel. If individual annunciation of a notification appliance circuit is desired, D192G modules can be connected to separate zones or points on-board or through the D8128D OctoPOPIT Eight-point Expander.

**Mounts in Panel Enclosure**

The D192G mounts inside the control panel enclosure using existing mounting holes or with a D137 or D138 Mounting Bracket. Refer to the control panel’s installation guide for more information on mounting.

¹ G-series = D9412GV4, D7412GV4, D7212GV4*, D9412GV3, D7412GV3, D7212GV3*, D9412GV2, D7412GV2, D7212GV2*, D9412GV1, D7412GV1, D7212GV1*  
² B series = B5512 and B4512  
³ These products are legacy products and have been investigated for compatibility only to UL864 8th edition  
* The D7212 models are not listed for commercial fire applications

**Notification Appliances**

Notification appliances used with the D192G Module must:  
- Be polarized (DC) equipment  
- Match the voltage rating of the alarm power supply

- Not exceed the current rating of the alarm power supply  
- Not exceed 3.0 A in combined device current for each D192G Module

**Wiring**

Use a Class B, Style W, two-wire circuit and wire according to the instructions supplied with the module. No more than twelve D192G modules can be used per system. For UL applications, a listed (UTRZ) regulated power supply can be used to power notification devices through the D192G module. To comply with NFPA Standards:
- The control panel and power supply must be supervised or installed in the same room not more than 20 ft (6 m) from the module  
- Wiring between the control panel and the power supply must be in conduit  
- Power supply fault conditions must be supervised by a UL Listed relay

**Technical specifications**

**Electrical**

- **External Power In**
  - Current: 3.0 A maximum  
  - Voltage: 12 VDC or 24 VDC nominal

- **Aux Power In**
  - Current: 100 mA maximum  
  - Voltage: 12 VDC nominal

- **Supervisory Zone Control**
  - Current: 5 mA maximum

**Mechanical**

- **Dimensions**: 5 in. x 3 in. x 0.75 in. (13 cm x 8 cm x 2 cm)

**Ordering information**

**D192G Notification appliance module**

The D192G Notification Appliance Circuit (NAC) module is used for wiring connections to remote signaling devices. The wiring is supervised for open, short, or grounded circuit faults. Either 12 VDC or 24 VDC notification devices can be used depending on the choice of power supply.
